SUMMARY

Full-stack software engineer with production experience building scalable web applications and leading immersive XR/VR projects, spanning modern frontend frameworks, asynchronous backend systems, and Unity-based interactive development.

SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, C

Frontend: Next.js, React, Tailwind CSS, HTML, CSS

Backend: FastAPI, Flask, REST APIs

XR / Game Dev: Unity, C#

Tools & Practices: Git, GitHub, Agile workflows

EXPERIENCE

Dawdle Labs — Frontend Developer

Jan 2026 – Jul 2026

- Built the full frontend of EaselReel, a production company website, using Next.js and Tailwind CSS.
- Integrated backend APIs to support authentication, licensing flows, and platform navigation.
- Implemented dynamic UI behavior, including institution-specific content segmentation.
- Improved usability and responsiveness across multiple company platforms as part of a 20-engineer agile, ticket-based team.

SimInsights — Backend Developer

Summer 2025

- Migrated the SimGenie backend from synchronous Flask to asynchronous FastAPI, enabling concurrent request handling and improved responsiveness under multi-user load.
- Built and modified Python API endpoints, maintaining compatibility between synchronous and asynchronous systems.
- Implemented partial WebSocket functionality for real-time interactions and enabled simultaneous multi-prompt processing, eliminating blocking behavior.
- Collaborated within a 5-engineer team under senior developer mentorship.

EMXR Internship — VR Developer (Lead)

2025 – 2026

- Led development of 4 interactive VR dorm environments in Unity/C#, designing navigation and interaction systems for full user exploration.
- Delivered the experience at UCI Celebrate, supporting 20–30 VR headsets under continuous use.
- Built both a standalone Unity deployment and a Hyperskill-hosted version for scalability, leading a 3-developer team through architecture and implementation.

UCI VR Lab — VR Developer / Lead Developer

2025 – 2026

- Led development of multiple VR experiences, including 360° immersive environments, directing technical decisions for a 4–5 developer team.
- Organized 3 VR showcases across university departments and mentored students in VR tools and workflows.

South Chinese Cultural Center — VR Developer (Lead)

Jan 2026 – Jun 2026

- Led development of a 10-minute narrative-driven immersive VR experience in Unity, directing a 3-developer team from concept through delivery.
- Implemented cinematic camera systems and environmental animations, including tree-growth, ripple, and scene-transition effects that interacted with one another.

PROJECTS

— NASA Psyche Capstone — Lead Developer / Systems Engineer

Jan 2026 – Jun 2026

- Built core systems for a Monopoly-style educational Unity game, implementing turn management, state management, and gameplay logic.
- Led structured guided user testing with recruited participants, coordinating feedback into iterative improvements.
- Handled testing logistics, including recruiting participants, for a 5-developer team coordinating with the NASA Psyche Mission sponsor through weekly meetings.

— Xperience — Full-Stack Social Platform

- Developed a full-stack social platform with user profiles, event posting, and dynamic content, integrating frontend, backend, and database layers.
- Deployed and demonstrated the platform on AWS.

— Weather App

- Built a web application with a React frontend and Flask backend, integrating external APIs to display real-time weather data.

EDUCATION

University of California, Irvine

June 2026

Bachelor of Science in Software Engineering
